Vol. CXIX

January-June
1921

Special Index Issue

THE AMERICAN ARCHITECT

243 West 39th Street
NEW YORK

Founded 1876

Published Fortnightly in New York

Six Dollars Yearly

A FOREWORD

THIS index is for the 119th volume of THE AMERICAN ARCHITECT. *This series of volumes constitutes an encyclopoedia of architecture in America. They mark the progression from a time when our architecture was but a re-echo of classic precedent to the present day when architecture, as practiced in this country, sets a standard for emulation all over the world.*

The development of architecture in America is a reflex of our great advancement as a nation. The progress of THE AMERICAN ARCHITECT *has been in keeping with this great advancement. It mirrors today, as it has always done, the highest ideals of a profession that is the oldest of all the arts, and it has blazed the way to a better appreciation of the dignities and the responsibilities of architectural practice.*

Its twenty-six issues each year, more than twice as many as any other architectural publication, form a compendium to architectural practice.

Its many illustrations—more than four hundred full page plates and approximately twice as many text illustrations—give to readers a larger volume of suggestive material on architectural subjects than is to be found elsewhere.

Its various departments of Architectural Engineering, Economics as applied to building, Specification and Cubage Costs, place in the hands of subscribers, a fund of material that makes the magazine indispensable to architects, engineers and students who are keenly interested in our architectural development.

The American Architect
Specification Manual *for* 1921

THE American Architect *Specification Manual*, edition of 1921, is now being prepared and will be ready for distribution about August 1st.

We publish this volume as a service rendered to the profession which supports our publication, and copies of the *Manual* will be supplied (until the stock is distributed) free of charge to all practicing architects sending us requests on their office stationery. Many requests for the 1921 edition have already reached us, and we suggest that promptness in forwarding these requests is desirable in order to secure a volume before the stock is exhausted.

We take this opportunity to express appreciation of the cordial welcome given previous editions of the *Manual*. These were supplied to more than 3,000 architects in America, and have proved of practical value in the preparation of specifications, as evidenced by hundreds of letters received by us from architectural offices heartily commending the work.

The 1921 edition will be of greater size and importance than its predecessors, and will contain more than 170 specifications of standard building materials and processes. These specifications embody in condensed language the result of many years of experience of hundreds of experts in the use of the materials and methods specified.

Mr. Gardner C. Coughlen, Executive Secretary of the American Specification Institute, is acting as editor of the 1921 *Manual*. This is an indication of the quality of the form of the specification material.

The American Architect
